## About Me

I'm a student at the University of Douala, I'm 21 years old. I'm a full-stack web developer, and I use React.JS and NextJS to build frontend applications and Node (Express and NestJS) to build backend applications. My main aim is to build, test, and deploy web apps using JavaScript technologies.

French	●●●●
English	●●●●

## Educational

2018-2019

**Makepe High School**

It's where i got my bachelor's degree

2021 - present

**University of Douala in Cameroon**

I study computer science in the university of Douala since 2021 and i'm in level 2 now.

## Experiences

2021 - present

### Learning period

I start with the frontend development in 2021 with HTML, CSS and Javascript. Then i continue by learning ReactJS and Nodejs/ ExpressJs frameworks. I realized some small projects during my learning period.

2022

### Realization of a note-taking app

In the month of November 2022, i built an application that can help people store their notes, modify them, and delete them. They can also search them by tags. I used ReactJS and Typescript to build it. Link over here: <https://note-taking-app-phi.vercel.app/>

### Realization of a chat application

During the last week of 2022, I started building an application where someone can send messages and images to a group of people in a specific room in real time. Users register by entering their nickname and the name of the room they want to join.

The link : <https://chat-app-cucz.onrender.com/>

2023

### Invoice Generator

From February 2023 to May 2023, I built an application to generate invoices and send them to someone by email. It took me around 3 months to build this, and I was learning enough while doing this project. I use ReactJS, NodeJS (Express), and Nodemailer to do that.

Link to the project: <https://github.com/ivan01-tech/invoice-generator>

### **Nested comments system**

I also built a blog with an advanced system of comments where people can add new comments related to a specific post, update their comments, delete them, and also reply to other comments in an infinite way. It's like a small Reddit clone. I did it by using ReactJS, Node (Express), Prisma, and Tailwind CSS.
